```
        Dataset:  V:\RIECE DATA\RIECE_RELEASE V3-2017-2018/codebook\b3_run.dta
     Last saved:  27 Jul 2024 15:48
                  DATA HAVE CHANGED SINCE LAST SAVED

                  Label:  [none]
    Number of variables:  42
 Number of observations:  1,506
                   Size:  1,923,162 bytes ignoring labels, etc.
          Unique Values:  A list of all of the possible non-missing values
                          for the variable and the description of the values.
 Unique Missing Values:   There are four types of missing values

       .a or RF:  The subject explicitly refused to answer the question
                  when he or she should have.
       .b or NA:  The subject was never asked the question
                  for one reason or another. Usually this results
                  from "skip patterns" that occur.
       .c or DK:  The subject was unable to answer the question
                  either because he or she had no opinion or because
                  the required information was not available.
       .d or MI:  Items should be filled out but have no data entry found.
                  This is enumerator's own mistake. The circumstances
                  can be interviewers failing to ask a question
                  or forgetting to record a response

    Numeric Missing*:  .a                    String Missing*:  RF
                       .b                                      NA
                       .c                                      DK
                       .d                                      MI
