            Dataset:  V:\RIECE DATA\RIECE_RELEASE V3-2017-2018/codebook\b13_run.dta
         Last saved:  5 Jan 2024 09:58

              Label:  [none]
Number of variables:  43
Number of observations:  1,397
               Size:  289,179 bytes ignoring labels, etc.
      Unique Values:  A list of all of the possible non-missing values
                      for the variable and the description of the values.
Unique Missing Values:  There are four types of missing values

        .a or RF: The subject explicitly refused to answer the question
                  when he or she should have.
        .b or NA: The subject was never asked the question
                  for one reason or another. Usually this results
                  from "skip patterns" that occur.
        .c or DK: The subject was unable to answer the question
                  either because he or she had no opinion or because
                  the required information was not available.
        .d or MI: Items should be filled out but have no data entry found.
                  This is enumerator's own mistake. The circumstances
                  can be interviewers failing to ask a question
                  or forgetting to record a response

   Numeric Missing*:  .a                    String Missing*:  RF
                      .b                                      NA
                      .c                                      DK
                      .d                                      MI
