```
         Dataset:  V:\RIECE DATA\RIECE_RELEASE V3-2017-2018/codebook\b6_run.dta
      Last saved:  27 Jul 2024 15:50
                   DATA HAVE CHANGED SINCE LAST SAVED

           Label:  [none]
   Number of variables:  72
 Number of observations:  1,397
            Size:  1,239,139 bytes ignoring labels, etc.
   Unique Values:  A list of all of the possible non-missing values
                   for the variable and the description of the values.
 Unique Missing Values:  There are four types of missing values

        .a or RF:  The subject explicitly refused to answer the question
                   when he or she should have.
        .b or NA:  The subject was never asked the question
                   for one reason or another. Usually this results
                   from "skip patterns" that occur.
        .c or DK:  The subject was unable to answer the question
                   either because he or she had no opinion or because
                   the required information was not available.
        .d or MI:  Items should be filled out but have no data entry found.
                   This is enumerator's own mistake. The circumstances
                   can be interviewers failing to ask a question
                   or forgetting to record a response
```
