               Dataset:  V:\RIECE DATA\RIECE_RELEASE V3-2017-2018/codebook\a7_run.dta
            Last saved:   7 Nov 2024 10:31
                       DATA HAVE CHANGED SINCE LAST SAVED

                 Label:  [none]
   Number of variables:  57
Number of observations:  1,267
                  Size:  2,712,647 bytes ignoring labels, etc.
         Unique Values:  A list of all of the possible non-missing values
                         for the variable and the description of the values.
 Unique Missing Values:  There are four types of missing values

             .a or RF: The subject explicitly refused to answer the question
                       when he or she should have.
             .b or NA: The subject was never asked the question
                       for one reason or another. Usually this results
                       from "skip patterns" that occur.
             .c or DK: The subject was unable to answer the question
                       either because he or she had no opinion or because
                       the required information was not available.
             .d or MI: Items should be filled out but have no data entry found.
                       This is enumerator's own mistake. The circumstances
                       can be interviewers failing to ask a question
                       or forgetting to record a response

      Numeric Missing*:   .a                    String Missing*:   RF
                          .b                                       NA
                          .c                                       DK
